Monstevens Chameleon Van Partition and Console

The Chameleon is a one piece full size cargo van partition with console. It is molded from High Impact ABS and designed to keep the cab cool or heated by sealing off the cargo area and providing protection for the occupants from flying objects.

- It is designed to fit full size vans such as the FORD E-Series (1992 - 2013) and the GMC / Chevrolet vans (1996 - 2013).
- Chameleon 2000 Inc was awarded US patent # 5,246,261. This gave the owner of the patent the only rights to manufacture a one piece molded partition in the USA.
- The main feature of the Chameleon is the weight savings especially for new Hybrid, CNG or LPG and Electric vehicles (EV) where weight reduction is critical.
- The Chameleon weighs only 30 lbs compared to a steel partition weighing 130 lbs! That is a savings of 100 lbs per vehicle which results in either a fuel savings of 2.5%, longer range for battery and Natural Gas vehicles or increased load carrying capacity.
